Professur für Dynamische Systeme und Kontrolltheorie

Dr. habil. Andrii Mironchenko

Universität Bayreuth,
Lehrstuhl für angewandte Mathematik

Stability and control for nonlinear systems of infinite and varying dimension

The concept of input-to-state stability (ISS) is indispensable for various branches of nonlinear control theory, such as robust stabilization of nonlinear systems, robust nonlinear observer design, nonlinear detectability, stability of nonlinear networks, etc.

We will discuss the recent developments in the input-to-state stability of distributed parameter systems: criteria of input-to-state stability in terms of weaker stability notions, coercive and non-coercive Lyapunov methods for analysis of ISS. Next, we present nonlinear small-gain theorems for stability analysis of nonlinear infinite networks.

We close this talk by discussing the perspectives which ISS brings for the analysis of systems of variable dimension.

Ort: Mathematik Ost, Seminarraum 01.003

Zeit: Freitag, 14.02.2025 14:15

Zu diesem Vortrag laden wir Sie herzlich ein.
